

ENGINEERING
AND INNOVATION

COMPANY PROFILE

SNOW SERVICE srl

MUNICIPAL TECH srl

MADE-IN-ITALY

THE COMPANY

Snow Service, with head office in Piumazzo, province of Modena was founded in November 2011, but the experience of its managers in the production and the design of road winter service machines and snow removal equipment dates long before. However, while initially Snow Service was producing only winter service equipment (snowplows and salt spreaders) nowadays the company has expanded its research field to equipment and devices for the sustainable regeneration of urban areas, creating the new **Municipal Tech** brand. Snow Service has a total indoor area of 2300 square meters, divided into 2 production areas duly equipped for the operative function and another 2800 square meters of outdoor area for the warehouse.

We design and manufacture winter road maintenance products - snowplows, salt spreaders, chlorides and salt conveyor belts - and a wide range of equipment and devices for the sustainable regeneration of urban areas - road sweepers, multipurpose water modules and systems, tunnel washers, fire fighting equipment- paying high attention to our Customers' specific needs and realizing therefore effective customized solutions that optimize the working processes of our Customers, and the reduction of maintenance working costs. We can make changes to the various types of special customized equipment for the winter and summer road maintenance according to required specifications in order to meet your project needs.

We are competitive on the market as we have always invested in the research, in a team of qualified employees, and had as a main goal meeting the needs of every Customer in a timely manner.

WHO WE ARE

The entire range of our snowplows and salt spreaders and summer road maintenance equipment is designed to meet the specific demands of every single Customer.

All this is possible thanks to our highly qualified engineers, to our innovative vision, to the deep knowledge of every material we use, to the expertise of our staff and to the possibility of working with specialized companies from our area.

VISION

MISSION

Our mission is to be recognised as the Italian provider offering the highest quality.

*We are selling our products
in more than 21 countries
across the world!*

OUR KEY WORDS:

QUALITY

COMPETENCE

RELIABILITY

CERTIFICATION

The quality of the Snow Service production process is certified according to the international standard UNI EN ISO 9001: 2008. All the range of our road equipment is certified in the field of design, manufacture and service maintenance of snowplows, salt spreaders, V-plows, spreaders.

The quality of the production process we offer is proven not only by our experience and by our long-term loyalty Customers, but also by continuous assessments carried out by accredited certifications bodies. TÜV SÜD is a global provider of auditing and certification services and it is the accredited body that certifies that Snow Service meets the requirements of the UNI EN ISO 9000 standard for its whole range of certified products for the winter road maintenance. The TÜV SÜD provides a quality management framework demonstrating that Snow Service has taken due care to maintain high standards of quality, analysing the activities of the company and the Customers' needs.

Since 2011, in fact, we have implemented and maintained an active quality management system in compliance with the standard ISO 9001: 2008, applying in all business processes, from the production cycle to the maintenance service, the criteria necessary to obtain certifications for road machines.

The goal of ISO 9001 is indeed to ensure that the product provided by the company complies with quality requirements determined by a careful examination of the implicit and explicit expectations of Customers: our work is based on the strong belief that a satisfied Customer represents the most important evidence of an excellent service.

QUALITY SYSTEM

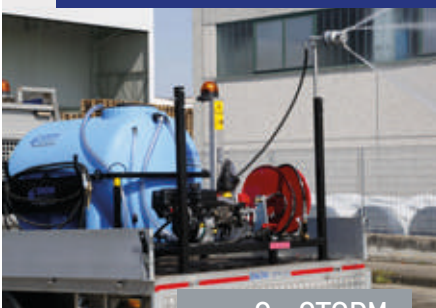

OUR PRODUCTS

designs and manufactures a wide range of winter road maintenance products.

With the collaboration of a qualified and experienced staff team in the field, the Company provides and market a complete range of winter service machines and equipment (snowplows and spreaders) all over the world. The salt conveyor belts and the sanitizing and disinfection modules complete our range of products. The design of the equipment realized by Snow Service is entirely done by the internal technical department supported by advanced 3D CAD software tools. Engineering and innovation for the design of snowplows and salt spreaders are the main principles that guide our single projects.
